Ardersier planning update

Thank you for the feedback received in response to our earlier update. Scottish Water has now submitted revised proposals for the Picket Fence Thickener tank and Inlet Works at Ardersier Waste Water Treatment Works to The Highland Council. These have been developed in consultation with the Community Liaison Group over recent months.

Visualisations

Updated visualisations reflecting the latest proposals have also been submitted and 4 of these are displayed alongside this poster.

The visualisations show the handrail on the Picket Fence Thickener tank folded down. This will only be in an upright position to allow infrequent operational access. Further visualisations are available online which show this.

The pictures show the landscaping and planting as they were in February when the baseline photographs were taken. As the planting comes into leaf and grows, it will provide additional screening. The site hoarding that is visible in the pictures will be removed as soon as construction is complete.

Representations

Full details of the planning submission can be found on the Council's website under reference **20/02401/FUL**, where representations can also be submitted. You can also write to ePlanning Centre, The Highland Council, Glenurquhart Road, Inverness, IV3 5NX.

Find out more
